Education

Seoul National University — Seoul, Republic of Korea
Ph.D. Candidate, Electrical and Computer Engineering — *2023 – present*

- Lab: Power Conversion and Systems Lab (PCSL)
- Advisor: Prof. Shenghui Cui
- Research: Modular multilevel converters (MMC), medium-voltage variable frequency drives, power-hardware-in-the-loop (PHIL) testing, real-time simulation.

Seoul National University — Seoul, Republic of Korea
M.S., Electrical and Computer Engineering; GPA: 4.03/4.3 — *2021 – 2023*

- Lab: Electrical Engineering & Power Electronics Lab (EEPEL)
- Advisor: Prof. Seung-Ki Sul
- Thesis: Real-Time Torque Control of PMSM under Flux Weakening Operation Based on Nonlinear Optimization.

Seoul National University — Seoul, Republic of Korea
B.S., Electrical and Computer Engineering; GPA: 3.35/4.3 — *2021*

Research Experience

Power Conversion & Systems Lab, Seoul National University — Seoul, Republic of Korea
Ph.D. Candidate; Advisor: Prof. Shenghui Cui — *2023 – present*

- MMC-Based MV Variable Frequency Drive: Led development of control algorithms and control systems for a 5 MW Modular Multilevel Converter VFD for shipboard applications.
- PHIL Testing for Megawatt-Scale MMC: Developed a partial power-hardware-in-the-loop framework for in-situ dynamic and steady-state validation of individual submodules in a megawatt-scale MMC.

Electrical Engineering & Power Electronics Lab, Seoul National University — Seoul, Republic of Korea
M.S. Researcher; Advisor: Prof. Seung-Ki Sul, IEEE Fellow — *2021 – 2023*

- IPMSM Optimal Control: Developed online MTPA tracking and flux-weakening torque control algorithms for interior permanent magnet synchronous motors using sequential quadratic programming (SQP) and min-max optimization, achieving robust performance under parameter uncertainties without lookup tables.

Teaching Experience

Seoul National University — Seoul, Republic of Korea
Teaching Assistant, Electric Machines and Control; Instructor: Prof. Seung-Ki Sul — *Fall 2021, Fall 2023*

- Responsibilities: Conducted lab sessions and tutorials; assisted students with coursework and problem sets.

Lecturer, SNU Power Electronics Center Summer School — *Summer 2022*

- Responsibilities: Delivered lectures on digital signal processor programming and embedded firmware development for power electronics applications.

Research Project

Development of a Medium-Voltage Drive Based on a Modular Multilevel Converter 2023 – 2025

HD Korea Shipbuilding and Offshore Engineering

- Developed an EtherCAT-based control system and developed motor-control algorithms specialized for MMCs.
- Demonstrated a 3 MW operation for 4.16 kV induction motors.

Development of a Parallel Computing Simulation Tool for Large-Scale Power Electronics Circuits 2025 – 2026

HD Korea Shipbuilding and Offshore Engineering

- Developed a multicore program to execute large-scale power-electronics circuit models created in PLECS.
- Presented the work at COMPEL 2026 and transferred the technology to HD KSOE for use in MVDC shipboard system design.

Development of a C-HIL Testbed for an LV Variable-Frequency Drive 2026 – present

HD Korea Shipbuilding and Offshore Engineering

- Developed a real-time simulation model of an LVAC shipboard power system including generators, propulsion motors, thermal models for power semiconductor devices, and inverters.
- Analyzed real-time simulation model stability under discretization.
- Demonstrated an actual control system from HD KSOE without any modification.

Development of a DC Transformer for MVDC Shipboard Power-System Integration 2026 – present

HD Korea Shipbuilding and Offshore Engineering

- Developed a testing circuit to characterize the reverse-recovery behavior of high-voltage diodes. Patent application in progress.

Awards

Third Prize of Presentation Award, 4th IEEE PELS Student Symposium on Power Electronics in Asia, 2026
